PROFESSIONAL SUMMARY

Database Administrator with 5 years of experience managing database environments across MS SQL Server (4 years), MySQL (2.6 years), and PostgreSQL. Expertise in high availability solutions including Always On Availability Groups, Failover Cluster Instances, Log Shipping, MySQL InnoDB Cluster, Master-Slave Replication, and PostgreSQL Streaming Replication. Proven track record in performance tuning, disaster recovery, AWS RDS management, and ensuring 99.9% database uptime.

TECHNICAL SKILLS

Database Platforms: Microsoft SQL Server 2012/2014/2016/2017/2019/2022

MySQL 5.7/8.0

PostgreSQL 15/16

MS SQL Server: Log Shipping , Transactional , Always On Availability Groups, Failover Cluster Instances, Merge/Snapshot Replication, Database Mirroring, SQL Server Agent, SSIS, SSRS, Query Store, Extended Events, Index Optimization, TDE, Always Encrypted, T-SQL

MySQL: Group Replication, Master-Slave Replication, Master-Master Replication, MySQL Router, ProxySQL, Percona XtraBackup, Performance Schema, Query Optimization, my.cnf Tuning, mysqldump

PostgreSQL: Streaming Replication, Logical Replication, pgBackRest, pg_dump, pg_restore, VACUUM, Autovacuum, ANALYZE, REINDEX, EXPLAIN ANALYZE, pg_upgrade

Cloud Technologies: Azure SQL (SQL Server, MySQL, PostgreSQL)

Azure SQL Database , Azure VM and Managed Instance

Amazon EC2, Amazon S3, AWS

Lambda, Amazon VPC, AWS CloudWatch, AWS IAM

Operating Systems: Windows Server 2012/2016/2019/2022, Linux (Red Hat, Ubuntu, CentOS)

Tools & Scripting: SQL Server Management Studio, MySQL Workbench, pgAdmin, PowerShell Scripting, Shell Scripting, Bash

PROFESSIONAL EXPERIENCE

Database Administrator

DBA DEV Software Solution Pvt Ltd | 4 Years

MS SQL Server Administration (4.1 Years)

- Configured Log Shipping and Transactional/Merge/Snapshot Replication for disaster recovery and distributed environments
- Implemented Always On Availability Groups and Failover Cluster Instances achieving 99.95% uptime for 100+ databases
- Performed performance tuning through index optimization, query analysis, execution plan reviews, and wait statistics analysis

- Managed backup operations (full, differential, transaction log) with automated scheduling and recovery strategies
- Executed database migrations and upgrades from SQL Server 2012/2014 to 2019/2022 with minimal downtime
- Implemented security best practices including TDE, Always Encrypted, and role-based access control
- Troubleshoot blocking, deadlocks, and long-running queries to optimize system performance

MySQL Administration (2.6 Years)

- Deployed MySQL InnoDB Cluster with Group Replication for automatic failover and high availability
- Configured Master-Slave and Master-Master Bidirectional Replication across geographically distributed servers
- Implemented MySQL Router and ProxySQL for load balancing and connection routing
- Performed my.cnf configuration tuning, version upgrades, and performance optimization using EXPLAIN plans
- Managed backup strategies using Percona XtraBackup, mysqldump, and automated scripts
- Resolved replication lag issues using Performance Schema and slow query log analysis

PostgreSQL Administration

- Set up Streaming Replication and Logical Replication for high availability and load distribution
- Configured pgBackRest for comprehensive backup and point-in-time recovery
- Performed database maintenance including VACUUM, ANALYZE, REINDEX, and connection pooling using PgBouncer
- Conducted query performance tuning using EXPLAIN ANALYZE and managed upgrades with pg_upgrade

Azure & AWS Cloud Database Management

- Deployed AWS RDS instances for SQL Server, MySQL, and PostgreSQL with Multi-AZ configurations
- Configured automated backups, snapshots, and point-in-time recovery on AWS RDS
- Managed Amazon EC2 instances and utilized Amazon S3 for backup storage with lifecycle policies
- Implemented AWS Lambda functions for automated maintenance and configured VPC security groups
- Monitored database performance using AWS CloudWatch metrics and alarms

Daily Operations

- Database creation, configuration, datafile management, storage management, and capacity planning
- User account management, permission grants, security auditing, and performance monitoring

- Incident response within SLA timeframes, technical documentation, and automation using PowerShell/Shell scripts

KEY ACHIEVEMENTS

- Reduced database downtime by 40% through implementation of Always On Availability Groups and InnoDB Cluster
- Improved query performance by 60% through systematic index optimization and query tuning initiatives
- Successfully migrated 50+ databases to AWS RDS with zero data loss and minimal downtime
- Automated 80% of routine DBA tasks using PowerShell and Shell scripting, saving 15+ hours weekly
- Implemented comprehensive backup strategy achieving RPO of 15 minutes and RTO of 30 minutes

CERTIFICATIONS

AWS Cloud Practitioner | AWS Solutions Architect (Completed AWS Training) & Azure SQL DBA (Training)
